CARE OF TUBERS

Caladium tubers (or bulbs, as they are called) are sensitive to cold. They should never be kept in cold storage. If your bulbs arrive during cold weather, it is important that they be removed from the carton and packing material and spread thinly on trays in a warm location with good air circulation. This handling is desirable at all times.

In Florida, South Texas, and the Gulf Coast, Gladiolus bulbs can be stocked for sale and planting in summer and early fall for fall and winter blooms. Flowers bloom 60 to 80 days from planting date and can withstand cold but not hard freezes.

TWO POPULAR PRICE LINES in PICTURE PACKAGED BULBS

DISPLAY RACK

Designed for outlets having good store traffic, this attractive, all-metal display stands about 6½ ft. high, occupies only four square feet of floor space, yet holds 12-16 dozen "Clear-Vu Jumbo" packages or 15-24 dozen "Big Pak" packages. Each tier revolves separately, which permits "shopping" the display from one position. This effective display for either, or both, "Clear-Vu Jumbo" and "Big Pak", can be used for our spring bulb line and then for our fall line, thus providing nearly year 'round sales and profits. The display rack is furnished on refundable deposit of \$12.00. Deposit is refunded when rack is returned freight prepaid, or when orders for our packages total \$240.00 at wholesale prices, in one season or consecutive seasons. For smaller outlets, an effective display for these packages can be made with peg board and hooks obtainable at your local building supply dealer.

AMARYLLIS, Domestic

GIANT HYBRID MEADE STRAIN

October to April

The American-grown Meade Strain of Amaryllis (*Hippeastrum*) makes gorgeous giant blooms in colors ranging from near white (with pencil striping) through various shades of pink to deepest reds and candy stripes. They are used extensively in the South for outdoor planting and they are popular bulbs in the North for indoor growing in pots. For indoor flowering, the bulbs should be potted in a mixture of fibrous loam, leafmold and sand, with liquid manure applied during the blooming period. They may be potted as soon as available, with the shoulder of the bulb protruding from the soil. If kept at a fairly even temperature at 65° F. they will develop a good vigorous root system. When the weather warms and after blooming, the potted plant can be placed in the soil outdoors and taken in again in the fall for flowering indoors. In mild climates bulbs may be kept outdoors in the ground from season to season; elsewhere they must be lifted and stored in dry sand through the winter.
